ACHIEVEMENT

I am not just a developer with over a decade of experience in developing web apps, mobile apps and a range of other technical skills (search, scientific computing and more). – I understand business with a lot of experience working for CME and startups (both as employer and contractor).

I know a LOT about what will make mobile apps and web apps deliver your business objectives rather than just look pretty. – I produce code of exceptional quality

I have fixed a lot of other developer's code since I became a freelancer and can not recall any who are better than me, and very few who are as good.

I have a strong academic background with a master degree. – I also put a lot of effort into updating and improving my skills.

I also advise on mobile and web software development, helping clients reduce execution risk, refine their concepts, and provide developers with precise specifications.

EXPERIENCE
